

CASE STUDY

How I Rebuilt Prudent AI's Website Positioning

From persona-led messaging to use-case-led narratives — lifting homepage conversion by +7%

Kaviyakavi Baskaran | Product Marketing Manager

THE CONTEXT

Prudent AI's Website Wasn't Converting the Right Buyers

Prudent AI is a bootstrapped B2B fintech (120+ employees, 50+ enterprise customers) building AI-powered mortgage decisioning for QM and Non-QM lenders. Competing against Ocrolus, Laminr, and Friday Harbor.

Hero section targeted a single persona (TPOs) — missing other high-value buyer segments

No clear USP or differentiator mentioned in above-the-fold messaging

Product UI shown without context — no outcome framing or proof points

B E F O R E

The Old Homepage — Single Persona-Led, No USP

The screenshot shows the Prudent AI homepage. The navigation bar includes the Prudent AI logo, links for Mortgage, MCA, Prudent AI vs. Competition, About us, and Resources, and a Book a Demo button. The main hero section features the headline "Empower your TPOs with income certainty in minutes." and a sub-headline "Spend less time fixing income docs—and more time closing loans." with a Get Started Now button. To the right, there is a preview of the "TPO Portal" interface, which includes an "Analysis Report" for Bruce Wayne, a "Risk Summary" with an "Overall Risk Rating" of "Good to go", and an "Income Trend" showing a 13.4% increase for the last 6 months. A bar chart shows the "Total Qualified Income" of \$7,430 per month based on the last 24 months of statements. Annotations in red text point to specific elements: "No mention of USP" points to the headline, "Single persona-led hero section" points to the hero section, and "Product UI without any context" points to the TPO Portal preview.

No mention of USP

Single persona-led hero section

Empower your TPOs with income certainty in minutes.

Spend less time fixing income docs—and more time closing loans.

Warning Proceed with warning Good to go

Income Trend

For last 6 months

13.4% ↑

Total Qualified Income

\$7,430 per month (based on last 24m statements)

Product UI without any context

This checks all the boxes needed for a perfect B2B website BUT our readers were confused

THE APPROACH

Repositioning the Homepage for Use-Case Clarity

Diagnosed the Gap

Audited existing messaging, analyzed competitor positioning (Ocrolus, Laminr, Friday Harbor), and mapped buyer intent signals from sales conversations.

Rewrote the Narrative

Shifted from persona-led ("Empower your TPOs") to use-case-led ("know ") — framing the product around outcomes, not roles.

Rebuilt the Page Architecture

Re-architected information hierarchy, added social proof from top lenders, shipped use-case landing pages mapped to active sales plays for QM and Non-QM segments.

AFTER

The New Homepage — Outcome-Driven

Prudent AI's core value proposition, explained in the way lenders understand

PRE-UNDERWRITE AUTOMATION PLATFORM

Determine eligibility at intake.

Prudent AI runs income verification and eligibility checks upfront. Files that won't qualify get flagged early. Files that pass arrive decision-ready.

See it in Action →

Conveys what exactly lenders will be doing & not empty promises

Social proof straight from top lenders

The current headline focuses on outcomes common for both QM & Non-QM. Since Prudent AI has already captured a fair market share of Non-QM, we wanted to maintain the authority and convey benefits at the same time

THE RESULTS

Impact of the Repositioning

+7%

**Homepage
Conversion Lift**

Biggest gains on Non-QM lender pages

\$300K

**Qualified Pipeline
in 4 Months**

Avg ACV \$45K, incl. one \$100K opportunity

-14%

**Sales Cycle
Reduction**

From 100+ days down to 86 days

4

**Enterprise
Deals**

Through ABM targeting top mortgage lenders

KEY TAKEAWAYS

What Made This Work

Use-case framing > persona framing when your product serves multiple buyer segments with shared pain points.

Customer language beats product claims — the new hero spoke to outcomes lenders already cared about, not features they had to interpret.

Social proof placed at the hero level signals trust immediately — critical for risk-averse enterprise buyers in fintech.

Positioning is a system, not a headline — landing pages, nav structure, and proof points all had to move together.
