

Upfront Income Positioning Doc

Objective

An internal document for sales and marketing teams to get a quick glance about Upfront Income key features, differentiators, target customers, market gap, etc.

About Upfront Income

Upfront Income enables IMBs to handle any income scenario, instantly identify missing documents per agency guidelines, and convert complex borrower income into agency-ready qualified income at intake across Fannie, Freddie, FHA, VA, and Non-QM.

By validating income upfront and allowing instant cross-agency scenario comparisons, it prevents underwriting surprises, reduces fall-throughs, shortens cycle times, and ensures every loan is structured correctly from day one.

Positioning Statement (Core)

For QM, Non-QM, and complex-income mortgage lenders who need to assess and structure borrower income accurately at intake without triggering downstream surprises, reinterpretation, or program misalignment, Prudent AI's Upfront Income is the first end-to-end income decisioning platform that converts wage, self-employed, rental, and multi-entity tax return income into agency-ready Qualified Income — fully aligned with Fannie Mae Income Calculator workflows — and carries that validated logic across the entire loan lifecycle, unlike standalone income calculators, document extraction tools, or department-specific worksheets, our platform integrates rental income into agency calculations, embeds liquidity analysis within the income workflow, enables real-time program comparison through one-click agency switching, and generates rep & warrant-backed findings — empowering lenders to select the right loan program from day one, reduce fallouts, eliminate income reinterpretation across teams, and make faster, defensible credit decisions at scale.

Key Benefits

- The Only Solution that provides Integrated Rental Income analysis tied to Fannie Mae guidelines (with Rep & Warrant)
- It Eliminates Income Reinterpretation Across Departments
- It Brings Program Selection into One Platform (Fannie Mae, Freddie Mac, FHA, VA, USDA, Bank statements)
- It helps lenders make decisions (and not just calculate Income)

All Income. One Platform. The First of its kind!

Target Customers

Primary:

- Credit
- Income
- Underwriting teams

Secondary:

- AEs
- Processors
- Broker-facing operations teams
